1. Applicant's election of the method group (i.e. claims 6-51) in the reply filed on November 26, 2004 is acknowledged. However, upon closer consideration of the claims, the claims are re-directed to three separate groups of inventions, as detailed below. Applicant is required to make an election, as well as making a species election. Applicant is not bound by the original selection, but if Applicant elects the method of making (i.e. group II) then he would need to further elect species for the ligation, the catalyst, and the substrate.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a composition, classified in class 526, subclass 346.
- II. Claims 6-24 & 37-51, drawn to a method of catalyst immobilization, classified in class 427, subclass 304.
- III. Claims 25-36 & 52-56, drawn to an article of manufacturing, classified in class 428, subclass 209.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by a different process such as by electroplating. The process as claimed can be used to make a different product such as a decalcomania.

Art Unit: 1775

4. Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because an inorganic catalyst can be used. The subcombination has separate utility such as a bonding agent.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Claims 15 & 17-19 generic to a plurality of disclosed patentably distinct species comprising ligating chemical agent, and claim 7 generic to a plurality of disclosed patentably distinct species comprising catalyst, and claim 8 generic to a plurality of disclosed patentably distinct species comprising materials for substrate. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1775

7. A telephone call was made to Atty: Paul Greeley on December 27, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cathy Lam whose telephone number is (571) 272-1538. The examiner can normally be reached on 9am-6pm.
